TSD	Treatment, Storage, and Disposal
USDA	U.S. Department of Agriculture
UST	Underground Storage Tank
VSQG	Very Small Quantity Generator

## Executive Summary

A Contamination Screening Evaluation (CSE) has been conducted for a 2.49-mile segment of N. Old Lake Wilson Road from CR 532 (Osceola-Polk County Line Road) to 730 feet south of Sinclair Road (study corridor) in accordance with the methodology described in Part 2, Chapter 20 of the Florida Department of Transportation (FDOT) Project Development and Environment (PD&E) Manual, dated July 1, 2020. The purpose of the CSE was to identify potential contamination sites that may impact roadway improvements planned for the study corridor. The location of the proposed study corridor is shown in **Figures 1 and 2**.

In accordance with the PD&E Manual, each potential contamination site identified within the study corridor was assigned a contamination risk rating (CRR) of **No, Low, Medium, or High**.

## Contamination Sites

Upon completion of the CSE, 17 potential contamination sites, or areas, were identified and evaluated. Seven sites, or areas, received a CRR of **Medium**; no site received a CRR of **High**. Site locations are shown in **Figure 6**. The status and assessment history of each site are summarized in **Table 2**.

Sites receiving a CRR of **Medium** are as follows:

- **Facility ID 9810601 – 7-Eleven Food Store** – 7585 Osceola Polk Line Road, Davenport, Florida (**Site C11/12**)
- **Ethylene dibromide (EDB)** – impacted groundwater zones (**Sites 14 and 18**)
- **Facility ID 9816099 – WAWA Food Market #5299** – 8103 Lake Wilson Road, Davenport, Florida (**Site 15**)
- **Reunion Resort Golf Courses** – 7599 Gathering Drive, Kissimmee, Florida (**Sites 22a/22b**)
- **Facility ID 9203008 – Heller Brothers Packing Corporation (Site 20) and Historic Agriculture Lands (Site 23/Study Corridor)** – Potential agrochemicals in soil and groundwater – Historical aerial review indicated the study corridor consisted of row crops (i.e., citrus groves) from 1944 through 1995 (including Site 20). Based on the potential for contaminants to exist within the soil and groundwater, it is recommended that the contractor create a Soil and Groundwater Management Plan for limiting worker exposure to shallow soils. If dewatering is necessary, a permit will be required, and effluent may need to be tested.

In accordance with the PD&E Manual, and based on proximity to the proposed roadway improvements, a Level 2 assessment, also known as an Impact to Construction Assessment (ICA), is recommended at **Medium** and **High**-risk sites.

## **1.0 Introduction**

A Contamination Screening Evaluation (CSE) was requested by Osceola County Department of Transportation and Transit for the reconstruction of a 2.49-mile segment of N. Old Lake Wilson Road, from CR 532 (Osceola-Polk County Line Road) to 730 feet south of Sinclair Road (study corridor). The CSE was conducted in accordance with the methodology described in Part 2, Chapter 20 of the Florida Department of Transportation (FDOT) Project Development and Environment (PD&E) Manual, dated July 1, 2020.

The purpose of the CSE was to identify potential contamination sites that may impact roadway improvements planned for the study corridor. A CSE is considered a “Level I” assessment; it consists of a desktop review of current and historical public records and site reconnaissance. The purpose of a Contamination Screening Evaluation Report (CSER) is to apply risk ratings to documented and suspected contamination sites identified during the CSE. This CSER describes the investigation’s methods and findings and provides contamination risk ratings (CRR) for potentially contaminated sites within specified distances of the study corridor.

The presence of contaminated environmental media (soil, groundwater, surface water, and sediment) and the existence of petroleum products or hazardous substances/materials within or adjacent to an existing or proposed right-of-way (ROW), can result in liability exposure through property ownership and can negatively impact project costs and schedules. Early identification of contamination sites that could affect the project can reduce costs and risks by informing project decisions regarding ROW acquisition, design, and construction.

## 2.0 Project Description

The study corridor consists of the 2.49-mile segment of N. Old Lake Wilson Road from CR 532 (Osceola-Polk County Line Road) to 730 feet south of Sinclair Road (**Figure 1** and **Figure 2-1 through 2-3**). Proposed improvements include reconstructing and widening the study corridor from a two-lane road to four-lane road with pedestrian sidewalks and a bicycle lane. No stormwater management ponds are proposed in association with the improvements.

### 3.0 Definitions

The following definitions relate to common terms that may be utilized in this report:

**Asbestos** – Naturally occurring, fibrous silicate minerals, including chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any such minerals that have been chemically treated and/or altered. All types of asbestos are known to cause serious health hazards. For purposes of this definition, “asbestos” includes presumed asbestos-containing materials (PACM) and regulated asbestos-containing materials (RACM).

**Asbestos-Containing Materials (ACM)** – Any material containing more than 1% asbestos, as defined in 29 Code of Federal Regulations (CFR) §1926.1101, Occupational Health and Safety Administration (OSHA).

**Brownfield** – Per Section 376.79(3), Florida Statute (FS), Brownfield refers to property that may be complicated by actual or perceived environmental contamination from expansion, redevelopment, or reuse.

**Cleanup Target Level (CTL)** – The concentration for each contaminant, identified by an applicable analytical test method in the medium of concern, at which a site rehabilitation program is deemed complete.

**Contaminant** – Any substance that is harmful to plant, animal, or human life.

**Contamination** – The presence of any contaminant in surface water, groundwater, soil, sediment, or land in concentrations exceeding applicable CTLs or water quality standards, which may result in contaminated sediment.

**Contaminated Site** – Any contiguous land, sediment, surface water, or groundwater areas that contain contaminants that may be harmful to human health or the environment.

**Contamination Screening Buffer** – An area within and adjacent to the study area that should be evaluated for possible additional contamination assessment.

**Contamination Source** – The place of origin or major concentration of contaminants from which contamination migrates to surrounding areas through soil or groundwater.

**Hazardous Material** – A general term that includes all materials and substances that are now designated or defined as hazardous by federal law, state law, or by the rules or regulations of the state or any federal agency: 40 CFR §261.30; 40 CFR §261.4; 40 CFR §§261.21-261.24; Section 376.301, FS; and Section 403.74, FS.

**Hazardous Waste Site** – A site at which wastes defined in Chapter 62-730, Florida Administrative Code (FAC), and 40 CFR §§260-272 have been disposed, treated, or stored.

**Level of Investigation** – To standardize contamination evaluations on transportation projects, FDOT broadly uses the following levels of contamination investigation:

- **Level I** – A CSE consisting of a desktop review of current/historical records and site reconnaissance to identify past and present activities that have the potential to impact areas in or immediately adjacent to project construction. This level is used to determine the need and scope of further assessments.
- **Level II** – A Level II assessment (also known as an Impact to Construction Assessment [ICA]) consists of a detailed evaluation of potentially contaminated sites based on the findings of the Level

I evaluation. When applicable, a Level II assessment includes soil sampling, laboratory testing, and/or installation of groundwater monitoring wells for sites with known or potentially contaminated materials. These steps are taken to assess the type and extent of contamination in potentially contaminated sites, to identify impacts to construction and associated costs for remediation, and to develop recommendations for Level III activities or avoidance measures, as warranted. Level II assessment is typically performed during the design phase, prior to ROW acquisition and construction; however, it may be performed during the PD&E phase for projects with advanced design activities or when it is required to substantiate the impact of potentially contaminated sites on the preferred alternative.

- **Level III** – Level III refers to additional evaluation of contamination identified or suspected based on the Level II assessment and any requisite remediation or abatement of contamination or hazardous materials. This level includes a detailed plan for removing and disposing of contaminated media, storage tanks, and/or other hazardous materials that may directly impact construction activities, ROW acquisition, or clearance. Level III activities can occur during design and ROW acquisition or during/prior to construction to avoid impacts to construction and project delays.

**National Pollutant Discharge Elimination System (NPDES) Stormwater Program** – A comprehensive two-phased national program (established by the Clean Water Act) that addresses non-agricultural sources of stormwater discharges that adversely affect the quality of our nation’s waters. The program uses the NPDES permitting mechanism to require controls designed to prevent harmful pollutants from being washed into local water bodies by stormwater run-off.

**Potentially Contaminated Site** – Any undocumented suspect site that has the potential to contain existing contamination or has the capacity to become contaminated in the future due to onsite activities.

**Remediation** – Activities necessary to remove, treat, or otherwise reduce contamination to a level acceptable to the regulatory agency having jurisdiction in accordance with Chapter 62-780, FAC.

**Solid Waste** – The Resource Conservation and Recovery Act (RCRA) defines a solid waste as “any garbage, refuse, sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial, or mining and agricultural operations, and from community activities **excluding** solid or dissolved materials in domestic sewage, or solid or dissolved materials in irrigation return flows, or industrial discharges which are point sources subject to permits under Section 402 of the Federal Water Pollution Control Act.”

**Superfund Site** – A site on the National Priorities List (NPL) as adopted by the U.S. Environmental Protection Agency (EPA).

## 4.0 Contamination Screening Methodology

MSE has conducted this CSE in general accordance with the methodology described in Part 2, Chapter 20 of FDOT's PD&E Manual (July 1, 2020). MSE reviewed readily available public information to identify known or potential contamination sites within the study corridor. The CSE for the study corridor includes the following search distances as defined in the PD&E Manual:

- 500 feet from the ROW for petroleum, drycleaners, and non-petroleum sites.
- 1,000 feet from the ROW for non-landfill solid waste sites.
- 0.5 mile from the ROW for Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), NPL, and landfill sites.

The evaluation consisted of the following:

- Review of physical setting conditions (topography, soils) in the study corridor.
- Review of land uses in the study corridor.
- Review of public records databases (OCULUS, Nexus, Geospatial Open Data) maintained by the Florida Department of Environmental Protection (FDEP), EPA, and local agencies.
- Review of a public records database search report prepared by Environmental Data Resources, LLC (EDR).
- Review of historical aerial photographs dating to 1944.
- Review of historical city directories listing businesses and residences in the study corridor.
- Site reconnaissance to identify potentially contaminated sites within or adjacent to the study corridor and to verify the locations of potentially contaminated sites identified during desktop review.
- Determination of a CRR for each potential contamination site.

## 5.0 Current Land Use

As shown in **Figures 3-1** through **3-3** and **Figures 4-1** through **4-3**, existing land uses along the study corridor are predominantly residential with golf courses to the east and west. Uses in the northern and southern ends of the study corridor consist of commercial buildings (i.e., a gas station, a retail store, restaurants). Additional details regarding land uses are provided in **Section 7.1**.

Adjacent land uses that have the potential for contamination include agricultural lands (historical application of agrochemicals) and two gas stations adjoining the southern extent of the corridor. These areas and other potential sources of contamination are described further in **Section 11.0**.

## 6.0 Hydrologic Features

### 6.1 Hydrogeology/Hydrology

Multiple aquifers are present in the Central Florida region. The unconfined surficial, or “water table,” aquifer is separated from the deeper Floridan aquifer by a semi-confining unit that is present throughout most of Central Florida. A simplified description of Central Florida’s hydrogeology is as follows:

- The surficial aquifer extends from land surface to depths of approximately 40 to 120 feet. The surficial aquifer is generally comprised of siliciclastic sediments, including sand, silt, clay, and shell. Permeability within the surficial aquifer ranges from high to moderate.
- The Hawthorn Group, an intermediate-depth, lower-permeability, semi-confining unit, underlies sediments of the surficial aquifer. The unit is generally comprised of clays with some sand, limestone, and dolomite, and ranges in thickness from nearly absent to thicker than 100 feet. The amount of groundwater flow between the surficial and Floridan aquifers is dependent upon the thickness and uniformity of the Hawthorn Group’s confining beds, which vary throughout Central Florida.
- A massive sequence of carbonates (limestone and dolostone units) known as the Floridan aquifer lies beneath the Hawthorn Group. In Central Florida, the Floridan aquifer is comprised of multiple units of varying permeability that collectively are greater than 1,000 feet thick. Limestone of the Upper Floridan aquifer generally exhibits high permeabilities due to the presence of secondary porosity, fractures, solution channels, and cavities. The Floridan aquifer is the primary source of drinking water in central Florida.

Local rainfall, irrigation, lakes, ditches, and streams recharge water in the surficial aquifer; however, upward leakage can occur in areas where the potentiometric surface of the Upper Floridan aquifer is above the water table. Impacts caused by surface releases of petroleum are typically limited to the upper surficial aquifer due to the low specific gravity of petroleum constituents; however, impacts from certain solvents or inorganic constituents can migrate deeper into the surficial aquifer and potentially affect the Floridan aquifer.

Surface overflow generally drains rainfall across the study corridor. Surface topography, stormwater management features (ponds, swales), and local geological features (sinkholes) may influence local surficial groundwater flow directions.

### 6.2 USDA NRCS Soil Survey Review

The U.S. Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Soil Survey is a comprehensive published source of information regarding near-surface soil and depth-to-groundwater conditions. The NRCS Soil Survey of Osceola County, Florida, was reviewed for information regarding near-surface soil conditions within the study corridor (**Figures 5-1 through 5-3**).

The NRCS Soil Survey identified the following soil units within the limits of the study corridor:

- 7 – Candler Sand, 0 to 5% Slopes
- 8 – Candler Sand, 5 to 12% Slopes
- 15 – Hontoon Muck, Frequently Pondered, 0 to 1% Slopes (Hydric)
- 34 – Pomello Fine Sand, 0 to 5% Slopes
- 37 – Pompano Fine Sand, 0 to 2% Slopes (Hydric)

- 40 – Samsula Muck, Frequently Flooded, 0 to 1% Slopes (Hydric)
- 42 – Smyrna Fine Sand, 0 to 2% Slopes

Information in the NRCS Soil Survey is generalized and may be outdated if recent development has modified soil or surface/subsurface drainage conditions; therefore, it may not be representative of actual soil and groundwater conditions in the study corridor.

## 7.0 Historical Data Review

### 7.1 Historical Aerial Photograph Review

Historical aerial photographs of the study corridor were reviewed to evaluate past land uses and identify features that may indicate the presence of contamination. Historical aerial photographs were accessed through EDR and Google Earth. Aerial photographs for the following years were reviewed: 1944, 1950, 1958, 1968, 1971, 1977, 1980, 1984, 1995, 1999, 2007, 2010, 2013, and 2017 (**Appendix A**). Historical aeriels were not readily available prior to 1944.

A summary of MSE’s historical aerial review is presented in **Table 1**.

**Table 1: Historical Aerial Review of N. Old Lake Wilson Road from CR 532 to 730 feet south of Sinclair Road, Osceola County, Florida.**

Year	Database Source	Summary
1944	EDR	This aerial depicts the study corridor as largely undeveloped, natural lands. The study corridor appears as an unimproved road. CR 523 (Osceola-Polk County Line Road) is apparent at the southern end of the study corridor. Row crops (citrus) are apparent within the north and south limits of the study corridor, and land clearing is visible within the central area. An unimproved road/trail is apparent east of the corridor, approximately 1 mile south of the northern limits of the corridor.
1950	EDR	Land clearing is apparent throughout the west side of the study corridor. The east side of the site remains relatively unchanged.
1958	EDR	Areas west of the study corridor are dominated by row crops. A section of land approximately 1,700 feet south of I-4 and east of the study corridor has been cleared. The remainder of the corridor remains largely unchanged.
1968	EDR	The study corridor is dominated by row crops. I-4 is apparent crossing the study corridor. Approximately 1 mile south of I-4, a structure is apparent to the east of the study corridor, with an associated entrance to the site. An unimproved road/trail is apparent crossing the study corridor from east to west approximately 0.5 mile north of the southern end of the corridor.
1971	EDR	Study corridor remains relatively unchanged.
1977	EDR	Study corridor remains relatively unchanged.
1980	EDR	Areas of remnant row crops are apparent near the I-4 crossing and the southern limits of the study corridor. The remainder appears relatively unchanged.
1984	EDR	Study corridor remains relatively unchanged. Row crop areas (citrus) appear largely derelict.
1995	EDR	The study corridor remains relatively undeveloped with remnant row crops apparent. Development is noted south of I-4; east of the study corridor; and north of I-4, west of the study corridor with an associated entrance road.
1999	EDR	Study corridor remains relatively unchanged.
2007	EDR	Sinclair Road is apparent at the north end. Land clearing activities are apparent east of the corridor, north of I-4. Residential housing development, a golf course (Reunion), and internal and access roads are apparent south of I-4, east and west of the corridor. Commercial

Year	Database Source	Summary
		development is apparent north of CR 532 and east of the study corridor. CR 532 appears to be a four-lane divided highway.
2010	EDR	Study corridor remains relatively unchanged.
2013	EDR	Study corridor remains relatively unchanged.
2017	EDR	Residential development is apparent south of Sinclair Road, east and west of the study corridor. The remainder of the study corridor is relatively unchanged.

## 7.2 City Directories

City directories are listings of businesses and residences, much like a standard telephone book; however, listings are organized in multiple formats, including by address, phone number, and name. City directories only list company or resident names and do not contain information specifying land uses. For this study, historical listings by address were referenced to infer past land uses.

MSE contracted EDR to search city directories for the study corridor (**Appendix B**). Review of the city directories did not identify potential contamination sites within the study corridor beyond those identified in the regulatory database search. Information regarding the identified facilities is provided in **Table 2**.

## 7.3 Sanborn Maps

Insurance companies have historically prepared fire insurance maps, such as those created by the Sanborn Map Company, for use in assessing fire risk, particularly in historically urban areas. These maps contain details about building construction, business type, building contents, fuel storage tanks, and other factors affecting fire risk. MSE requested that EDR query publicly available historical fire insurance maps for the site and its vicinity. According to EDR, no maps were available for the site or adjacent properties, as documented in **Appendix C**.

## 8.0 Site Reconnaissance

MSE representatives performed reconnaissance of the study corridor on December 13, 2021, to document observable conditions in the area and determine current land uses that could be contaminated. Additionally, MSE representatives reviewed potential contamination sites identified in the historical data and public records reviews.

Areas along the ROW were visually inspected for evidence of contamination, such as land use, business type, stressed vegetation, underground storage tank (UST) vent and fill pipes, accumulated areas of debris, evidence of buried materials, and areas of staining. Sites within search/buffer distances prescribed by the PD&E Manual were also inspected.

Sites presenting a risk for contamination based on observations made during reconnaissance are identified in **Section 11.0**. Photographs taken during reconnaissance are provided in **Appendix D**.

## 9.0 Public Records Review

A public records review was performed to identify documented contamination and potential contamination sources on the study corridor or within buffer distances prescribed in the PD&E Manual. MSE contracted EDR to compile a report summarizing information gathered from various state and federal databases that list facilities that have the potential to impact the project. Such facilities include Superfund sites, Brownfield areas and sites, solid waste disposal facilities (landfills), hazardous waste facilities (registered users, handlers, generators, and treatment facilities), registered petroleum storage tanks, and spill incident sites. The EDR Radius Map Report with GeoCheck, provided as **Appendix E**, includes a description of the various information sources and database update information.

### 9.1 Federal Database Sources

The following federal databases were included in the EDR database search for the target property and prescribed buffer zones:

- NPL Superfund Sites
- Proposed NPL Sites
- Superfund Enterprise Management System (SEMS)
- Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) Sites
- CERCLIS Liens
- RCRA Corrective Action Sites (CORRACTS)
- RCRA Non-CORRACTS Treatment, Storage, and Disposal (TSD) Sites
- RCRA Generator Lists (conditionally exempt, small-quantity, and large-quantity generators)
- RCRA Inventory of Open Dumps
- Facility Index System (FINDS) Sites
- Toxic Release Inventory System (TRIS)
- Hazardous Materials Incident Response System (HMIRS) Sites
- Federal Institutional Controls/Engineering Controls (IC/EC) Registry
- Emergency Response Notification System (ERNS) Sites

### 9.2 State Database Sources

The following state-level database sources, primarily maintained by FDEP, were included in the EDR search for the target property and prescribed buffer zones:

- State and tribal NPL and CERCLIS equivalent sites
- State and tribal lists of hazardous waste sites identified for investigation or remediation (dry-cleaning facilities)
- State and tribal landfill and solid waste disposal sites
- State and tribal registered USTs and aboveground storage tanks (AST)
- State and tribal leaking storage tanks (LST)
- State and tribal IC/EC
- State and tribal voluntary cleanup sites
- State and tribal Brownfield sites

### 9.3 Additional File Review Sources

In addition to the databases listed in **Sections 9.1** and **9.2**, supplemental federal, state, and local information sources were reviewed. These sources included the following:

- FDEP online databases:
  - Map Direct website
    - Contamination Locator Map
    - Institutional Controls Registry
    - Formerly Used Defense Sites (FUDS) Points
    - Oil and Hazardous Materials Incidents (SPILLS)
  - Nexus Information Portal
  - Geospatial Open Data Portal and Download Website
- Per- and Polyfluoroalkyl Substances (PFAS) and Aqueous Film Forming Foam (AFFF) databases:
  - Perfluorooctanoic acid (PFOA) and Perfluorooctane Sulfonate (PFOS) Contaminated Sites
  - Fire Fighter Training Facilities

### 9.4 Search Distances

The following search distances, as recommended in Part 2, Chapter 20 of the PD&E Manual, were employed in evaluating potentially contaminated sites in the study corridor:

- 500 feet from the ROW line for petroleum, drycleaners, and non-petroleum sites.
- 1,000 feet from the ROW line for non-landfill solid waste sites (such as recycling facilities, transfer stations, and debris placement areas).
- 0.5 mile from the ROW line for CERCLA, NPL Superfund sites, and landfill sites.

Potentially contaminated sites within these buffer distances are described in **Section 11.0**.

## 10.0 Interviews

Attempts were made to interview regulatory agency personnel regarding potential contamination sources in the study area. Inquiries to regulatory agencies for interviews are typically addressed with recommendations that public databases be searched, such as those available through FDEP's MapDirect, Nexus, and OCULUS databases at the state level, and EPA's Superfund and Envirofacts databases at the federal level. MSE conducted searches of these databases, as well as others, as described in **Section 9.0**.

MSE contacted Osceola County Fire Rescue (OCFR) Records Department for information regarding hazardous material spill incidents occurring within the study corridor. OCFR was not able to provide information regarding the study corridor at the time this report was prepared.

## 11.0 Potential Hazardous Materials and Contamination Impact Sites

### 11.1 Contamination Risk Rating

A CRR was assigned to each potentially contaminated site in the study corridor, as determined by the public records review, historical aerial photograph review, site reconnaissance, and interviews. The CRR system was developed by FDOT (Part 2, Chapter 20 of the PD&E Manual) and is defined by four categories:

1. **No (N)** – A review of available information on the property and the conceptual or design plans indicate there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property; however, findings from the Level I evaluation or sampling and testing results indicate that contamination impacts are not expected.
2. **Low (L)** – A review of available information indicates that former or current activities on the property have an ongoing contamination issue. The site has a hazardous waste generator identification number, or the site stores, handles, or manufactures hazardous materials; however, based on the review of conceptual or design plans and/or findings from the Level I evaluation, it is not likely that there are any contamination impacts to the project.
3. **Medium (M)** – After a review of conceptual or design plans and findings from a Level I evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to determine the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a “Medium.” Properties used historically as gasoline stations that have not been evaluated or assessed by regulatory agencies, sites with abandoned-in-place petroleum USTs, or sites currently operating gasoline stations should receive this rating.
4. **High (H)** – After a review of all available information and conceptual or design plans, appropriate analytical data shows that contamination will substantially impact construction activities, have implications to ROW acquisition, or have other potential transfer of contamination-related liability to FDOT.

CRRs are based on current conditions and may not reflect conditions that could exist in the future. The rating can change based on changes in design, construction activities, construction methods, ROW needs, or other factors when the project progresses from design to construction.

### 11.2 Potential Contamination Sites

Seventeen potentially contaminated sites were identified within the study corridor. Each site was evaluated and assigned a CRR of **No**, **Low**, **Medium**, or **High**. Of the 17 sites, seven sites, or areas, were rated **Medium**; no sites received a CRR of **High**. Locations of the 17 sites are depicted in **Figure 6**.

**Table 2** lists each potential contamination site and presents a summary of associated public records reviews and site reconnaissance observations. Applicable documents obtained from the public records search are included in **Appendix F**.

Table 2: Potential Contamination Sites within the N. Old Lake Wilson Road from CR 532 Study Corridor to 730 feet south of Sinclair Road

EDR/Figure 6 Map ID	Facility ID	Site Name	Site Address	Database/Source	Potential Contaminant/Contamination Source	Risk Rating	Comments
<b>Osceola County</b>							
1	110035708785	I-4 SR 400 Osceola County	South of 192 to Osceola Polk County Line Road	FINDS	N/A	N	This site is identified within the FIESTA FDM system, which maintains entity, environmental interest, and affiliation data for the State of Florida. No contamination or violations are reported within this database; therefore, this site was assigned a CRR of no.
2	110032761802, FLR10D71	Fifth Third Bank	N. Old Lake Wilson Road & CR 532	FINDS, ECHO	N/A	N	This site was issued a NPDES for stormwater management. No violations were reported, and this permit is closed. This site was assigned a CRR of no.
3	1010501690	The Villas at Reunion Square	900 Old Lake Wilson Road	FINDS, ECHO	N/A	N	This site was issued a NPDES for stormwater management. No violations were reported, and this permit is closed. This site was assigned a CRR of no.
A4, A5, A6, A7	110055507820, 1002782	Florida Gas Transmission	727 S. Old Lake Wilson Road	TIER 2, FINDS, ECHO, U.S. AIRS	Natural gas	N	This site is located southeast of the I-4/N. Old Lake Wilson Road intersection. Historical aerials suggest this facility was developed between 1984 and 1995, and records indicate that this facility has a pipeline that transports natural gas. This facility is monitored for GHG emissions. Based on records reviewed, this facility has received no violations. Because natural gas is volatile and does not impact the subsurface, this site was assigned a CRR of no.
B8, B9	9100367	Herman J. Heidrich & Sons, Inc.	1261 S. Old Lake Wilson Road	LUST, UST, RGA LUST	Petroleum and agrochemicals	L	This site historically operated as a citrus grove, which was located approximately 1 mile south of the intersection of N. Old Lake Wilson Road and I-4, along the east side of N. Old Lake Wilson Road. Soil and groundwater contamination were reported from the release of diesel fuel from four 30,000-gallon ASTs. Approximately 100 to 120 tons of excessively contaminated soils were removed, and groundwater monitoring was initiated in 1992. Sampling conducted in 1995 indicated no groundwater exceedances for a period of 2 years. An SRCO was issued for the facility in 1995. This site was subsequently redeveloped and currently operates as Reunion Golf Course. Based on reviewed records, the petroleum product storage systems formerly associated with this facility were assigned a CRR of low.
10	1011438238	Reunion-Turn Lane Additions	CR 545 & Sinclair Road & Heritage Road	FINDS	N/A	N	This site is identified within the FIESTA FDM system, which maintains entity, environmental interest, and affiliation data for the State of Florida. No contamination or violations were listed within this database; therefore, this site was assigned a CRR of no.
C11/C12	110037313485, 9810601	7-Eleven Food Store #34045	7585 Osceola-Polk County Line Road	FINDS, UST, financial assurance	Petroleum products	M	This site is located approximately 500 feet east of N. Old Lake Wilson Road, to the north of Osceola-Polk County Line Road. This facility maintains two USTs including a 15,000-gallon and a 10,000-gallon unleaded fuel tank that were both installed in 2008. Based on reviewed records, this facility has been found to be within compliance with no records of petroleum discharges. In accordance with FDOT's PD&E manual, active gas stations are assigned a CRR of medium.
C13	FLR000186239	CVS Pharmacy #1750	7575 Osceola Polk Line Road	RCRA-VSQG	N/A	N	This site is in the northeast quadrant of the N. Old Lake Wilson Road/CR 532 intersection and currently operates as CVS. Review of records found a 2012 permit requesting small quantity handler status associated with generating waste batteries, pesticides, pharmaceuticals, and mercury-containing lamps. A 2020 notification for a new hazardous waste FDEP/EPA ID or status/information change was submitted and approved. The facility currently operates as a VSQG for Hazardous Waste Pharmaceuticals – Healthcare Facility; the facility is permitted with no active hazardous waste treatment, storage, or disposal. No additional documents were available. Based on reviewed records and site reconnaissance, this facility was assigned a CRR of no.
14 and 18		Historic row crops	East and west of study corridor	DEDB	EDB	M	This area is located within the southern limits of the study corridor. Historical aerials depict row crops (citrus groves) from 1944 through 1995. Agricultural activities typically involve the use of agrochemicals (fertilizer, pesticides), which have the potential to accumulate in the shallow subsurface and leach from soil into the groundwater. From 1962 to 1983, the Florida Department of Agriculture and Consumer Services conducted widespread field applications of EDB, an agricultural pesticide, to control nematodes in citrus groves and on row crops. The potential presence of agrochemicals in soil could pose a health risk to workers and impacted soils may require offsite disposal. Based on historic land use, this site was assigned a CRR of medium.
D15	9816099	WAWA Food Market #5299	8103 Lake Wilson Road	UST, financial assurance	Petroleum products	M	This site is located within the southeast quadrant of the N. Old Lake Wilson Road/CR 532 intersection. Records reviewed identify three USTs installed in 2018, including a 22,000-gallon diesel fuel AST and 20,000-gallon and 22,000-gallon unleaded fuel USTs. A discharge was reported in June of 2020

EDR/Figure 6 Map ID	Facility ID	Site Name	Site Address	Database/Source	Potential Contaminant/Contamination Source	Risk Rating	Comments
							due to the failure of a containment integrity test of the diesel fuel spill bucket. The spill bucket was replaced and retested. During a site inspection in May 2021, the facility was found to be out of compliance due to corrosion surrounding regular and premium fuel sumps. There was also a fuel discharge that was not reported within 24-hours at the diesel sump. During the July 2021 inspection, this violation had not been corrected and diesel fuel was visually observed around the sump. At the time of this report (January 2022), the discharge of diesel fuel has not been investigated. The last inspection was conducted in July 2021. Due to the active status of the gas station and lack of documentation regarding the discharge, including undocumented direction of groundwater flow, proximity to the study corridor, and proposed ROW acquisition from the of property, this site was assigned a CRR of medium.
D16	FLR000231365	Tire Kingdom #6431	8093 Lake Wilson Road	RCRA-VSQG	N/A	N	This site is located south of CR 532 and east of N. Old Lake Wilson Road. This site is currently a Tire Kingdom and became registered with FDEP in 2019 as a VSQG. No violations were documented at the time of this report. Based on document review and site reconnaissance, no indications of contaminant releases were identified; therefore, this site was assigned a CRR of no.
19	ERIC_12895	Magnolia Creek East	S. Lake Wilson Road	DWM contamination, responsible party	Pesticides	N	This site is located approximately 1,300 feet east of N. Old Lake Wilson Road and is currently part of Reunion Resort & Golf Club. In 1995, several empty, unmarked drums were identified within the property. FDEP requested soil and groundwater samples to test for potential contaminants. Following sampling, approximately 100 cubic yards of contaminated soil were excavated. Deep soil excavation was successful at removing contaminated soil and groundwater from the area. In 1997, the contaminated soil was removed and properly disposed of. In the same year, the site received an NFA based on remedial activities and of groundwater sampling results. Based on the remedial action, redevelopment of the site, and distance from the study corridor, this site was assigned a CRR of no.
20	9203007	Heller Brothers Packing Corporation	2 miles south of 192	LUST, AST	Petroleum and agrochemicals	M	This site was historically a citrus grove within the southwest quadrant of the intersection of N. Old Lake Wilson Road and Sinclair Road. A discharge of approximately 100 gallons of diesel fuel was discovered during the removal of an abandoned underground diesel fuel pipeline in 1991. A contamination assessment was conducted on the site in November 1992 to assess whether pesticides remained within the property boundaries. Results from soil sampling suggested the presence of dieldrin; therefore, groundwater samples were collected at nearby monitoring wells. Results indicated non-detectable concentrations below regulatory standards. No additional reports were available regarding the discharge; however, a NFA was approved in 1992 following review of a contamination assessment report. Historical aerial review indicates that this site was redeveloped as a residential development in 2015. Based on the potential for agrochemicals to be present in soil and/or groundwater, this site was assigned a CRR of medium as a component of the overall former agriculture use of the study corridor.
21	26040, ERIC_9113	Best Diversified, Inc.	945 N. Old Lake Wilson Road	SWF/LF, responsible party, cleanup sites, DWM contamination	Construction/demolition debris disposal site	L	This site is located approximately 0.25 mile east-northeast of the northern extent of the corridor where N. Old Lake Wilson Road and Sinclair Road intersect. This site was historically operated as a construction and demolition debris landfill with approximately 35 acres used for disposal. A Phase I and II ESA (including groundwater monitoring) were conducted to evaluate the potential for contamination within the site. Groundwater sampling conducted between 2011 and 2013 indicated that the landfill had minimal effect on the groundwater and surface water quality on the property, suggesting that the landfill was stable. Groundwater and surface water flows were determined to be toward the east and southeast, away from the study corridor. Though elevated concentrations of ammonia-N and TDS were noted within several monitoring wells, FDEP no longer enforces a GCTL for ammonia in groundwater. Closure of the site commenced in February 2009 and was officially completed in September 2013 with a 2-foot cap. Review of the 2021 Google Earth aerial depicted construction activities, including earth moving activities taking place east of N. Old Lake Wilson Road and west of the old landfill site. Based on records reviewed, the former facility's distance from the study corridor, and groundwater flow toward the east and southeast, the likelihood for any landfill contaminants to impact the study corridor is considered low.

EDR/Figure 6 Map ID	Facility ID	Site Name	Site Address	Database/Source	Potential Contaminant/Contamination Source	Risk Rating	Comments
22a/22b		Reunion Golf Course/ Historic agriculture use	Adjacent to the ROW	Historical aerial and site reconnaissance	Pesticides, herbicides	M	Golf course facilities commonly store and use pesticides and petroleum products. Contaminants of potential concern for golf courses are similar to those associated with agricultural land uses; most of this present-day golf course's land was formerly citrus grove. The application or potential release of chemicals, including pesticides, could pose a health risk to workers and require additional coordination for dewatering and disposal of impacted soils; therefore, golf course land uses adjoining the study corridor have been assigned a CRR of medium.
23	N/A	Former agricultural land use of study corridor	Study corridor		Agrochemicals	M	Agricultural activity (citrus groves) was evident throughout the study corridor in aerials from the mid-1940s through the early 1980s. Historical citrus farming typically applied agrochemicals, such as pesticides, herbicides, insecticides, fungicides, fertilizers, and petroleum distillate, to crops. Over time, some of the more persistent and stable agrochemicals and their degradants can accumulate in shallow soils and potentially leach from soil into underlying groundwater. Agrochemicals often identified in soil and groundwater of former Florida citrus areas include pesticides such as EDB, DDE, DDT, aldrin, dieldrin, diuron, aldicarb, norflurazon, simazine, atrazine, bromacil, 2,4-D, arsenic, and copper; and nutrients from fertilizers such as nitrogen. Agrochemicals could pose a health risk to workers and require additional coordination for dewatering and/or disposal of impacted soils; therefore, areas of land adjoining the study corridor formerly used for agriculture have been assigned a CRR of medium.

**Abbreviations:**

AIRS – Aerometric Information Retrieval System  
 AST – Aboveground Storage Tank  
 CRR – Contamination Risk Rating  
 DDE – 1,1-Dichloro-2,2-bis-(4-chloro-phenyl) Ethane

 UST – Underground Storage Tank  
 VSQG – Very Small Quantity Generator

### 11.3 Agricultural Land Uses

Agricultural activities such as row crop farming typically involve the use and/or storage of agrochemicals (pesticides, fertilizers), and petroleum products. Agrochemicals have the potential to accumulate in the shallow subsurface and can leach from soil into groundwater. From 1962 to 1983, the Florida Department of Agriculture and Consumer Services conducted widespread field applications of ethylene dibromide (EDB), an agricultural pesticide, to control nematodes in citrus groves and on row crops.

Information obtained from the historical aerial photograph review and site reconnaissance indicated former agricultural activity occurred on properties adjoining the study corridor. Much of the former agricultural area has since been developed into residential dwellings and golf courses. The use of agrochemicals, and potentially petroleum products, on and around the ROW has the potential to impact soil and groundwater.

The presence of former agricultural lands within a study corridor may present a risk for the ROW and associated construction, especially work involving excavation for stormwater drainage systems (drainage swales, culverts, etc.). The potential presence of agrochemicals in soil and groundwater may pose a health risk to workers, impacted soils may require offsite disposal, and dewatering may require additional coordination. EDB has been documented in groundwater based on sampling of water supply wells within and adjacent to the study corridor. Areas documented as impacted by EDB (Sites 22a and 22b) have been assigned a CRR of **Medium** as described in **Table 2**.

### 11.4 Cattle Dipping Vats

From 1906 to 1960, approximately 3,400 cattle dipping vats (CDV) were constructed in Florida to eradicate the tick that was transmitting "southern cattle fever." Constructed with concrete, CDVs were typically 30 feet long, 7 feet deep, and 3 feet wide. Each CDV contained 1,500 to 2,000 gallons of dipping solution, which often contained dissolved arsenic. After the mid-1940s, the dipping solutions may have contained dichloro-diphenyl-trichloroethane (DDT); 1,1-dichloro-2,2-bis-(4-chloro-phenyl) ethane (DDE); toxaphene; and benzene hexachloride (BHC). Contamination from arsenic and other pesticides may remain at former CDV sites and could present an environmental or public health hazard should construction encounter the impacted areas.

FDEP maintains a database of known CDVs throughout Florida. The database provides information on a county level and in most cases does not provide precise CDV locations. MSE's review of the database identified 76 known CDVs in Osceola County (ranging from 1931 to 1950) (**Appendix G**). Cattle ranching/pasture lands were not identified in the study corridor, and MSE did not observe any CDVs during historical aerial review or reconnaissance, as viewed from public roadways (private properties were not traversed).

### 11.5 Well Sites

MSE utilized EDR to search for registered well sites within the study corridor. The search was primarily conducted to locate permitted public water-supply wells; however, the search also included permitted groundwater monitoring wells, oil and gas wells, water-use permits, and provided general groundwater flow direction.

Florida Legislature created the State Underground Petroleum Environmental Response Act (SUPER Act) in response to groundwater contamination from leaking underground storage tanks (LUST). The SUPER Act program identifies areas within the state with contaminated drinking water resulting from petroleum spills or discharges, or other discharges to the environment (i.e., EDB). The program conducts well

surveillance (water sampling) in potentially impacted areas. EDR's search identified the following wells within 500 feet of the study corridor:

- Well ID 8 – This well is permitted through South Florida Water Management District as an irrigation well.
- Well ID 20 – SUPER Act Well Program – this well is within an area FDEP has identified as contaminated with EDB.

The EDR Well Search Report is provided in **Appendix H**.

### **11.6 Railroad Corridors**

No railroad corridors were identified within the study corridor based on observations made during site reconnaissance and historical records review (historical topographic maps and aerial photographs).

### **11.7 Bridges and Buried Utilities**

In the interest of protecting the health and safety of construction contractors, consultants, and others present during planned construction/demolition work, FDOT recommends that ACM and metal-based coating (MBC) surveys/inspections be conducted on bridges and underground utilities (stormwater piping) that may require replacement or renovation resulting from planned roadway and stormwater management improvements. Based on historical records and site review, the following were identified within the study corridor:

- Reunion Boulevard Bridge (2004 – overhead)
- Culvert north of Reunion Boulevard Bridge
- SR 429 Interchange with I-4 (2007 – overhead)
- Old Lake Wilson Road Bridge over I-4 (1971)

An evaluation of buried utilities containing ACM or MBC was not included in the requested scope of work.

## 12.0 Conclusions and Recommendations

MSE completed a CSE for the study corridor described as “N. Old Lake Wilson Road from CR 532 to 730 feet south of Sinclair Road.” The purpose of the evaluation was to determine the potential for encountering contamination within the limits of the study. There is potential liability associated with construction and acquisition of an ROW that is contaminated, as it can significantly impact costs and timelines associated with construction.

For each potential contamination site identified within the study corridor, a CRR of **No**, **Low**, **Medium**, or **High** was assigned, as described in **Section 11.0**. MSE identified 17 sites within the study corridor that received a CRR. Seven sites, or areas, received a CRR of **Medium**. Site locations are shown in **Figure 6**. The status and assessment history of each site are summarized in **Table 2**.

Sites receiving a CRR of **Medium** are as follows:

- **Facility ID 9810601 – 7-Eleven Food Store** – 7585 Osceola Polk Line Road, Davenport, Florida (**Site C11/12**)
- **Ethylene dibromide (EDB)** – impacted groundwater zones (**Sites 14 and 18**)
- **Facility ID 9816099 – WAWA Food Market #5299** – 8103 Lake Wilson Road, Davenport, Florida (**Site 15**)
- **Reunion Resort Golf Courses** – 7599 Gathering Drive, Kissimmee, Florida (**Sites 22a/22b**)
- **Facility ID 9203008 – Heller Brothers Packing Corporation (Site 20) and Historic Agriculture Lands (Site 23/Study Corridor)** – Potential agrochemicals in soil and groundwater – Historical aerial review indicated the study corridor consisted of row crops (i.e., citrus groves) from 1944 through 1995 (including Site 20). Based on the potential for contaminants to exist within the soil and groundwater, it is recommended that the contractor create a Soil and Groundwater Management Plan for limiting worker exposure to shallow soils. If dewatering is necessary, a permit will be required, and effluent may need to be tested.

CRRs are based on current conditions and may not reflect conditions that could exist in the future. When the study progresses from design to construction, the rating may change based on changes in design, construction activities, construction methods, ROW needs, or other factors. MSE recommends performing an updated review of available public records and other pertinent data once construction plans and ROW acquisition needs have been finalized to ascertain the latest information concerning assessment or remediation activities at sites identified in this CSER, per guidelines set forth in Part 2, Chapter 20 of the FDOT PD&E Manual, dated July 1, 2020. Recommendations for future activities will be made based on the results of the updated records and design reviews.

Per PD&E Manual guidance, MSE recommends a Level II Assessment for sites receiving a CRR of **Medium** or **High**. Level II investigations are recommended during the design phase, prior to ROW acquisition or roadway construction activities.

## 13.0 Limitations

The findings, opinions, conclusions, and recommendations presented herein are based in part on readily available and practically reviewable information contained in public records. MSE does not warrant or guarantee the accuracy or completeness of this information. Some public record information, such as soil or groundwater quality test results, groundwater contamination plume maps, groundwater flow direction maps, and the locations of USTs or ASTs, may be outdated and not representative of current (January 2022) or future conditions. Please refer to this report and supporting documentation in its entirety for a complete understanding regarding our evaluation methodology and the age and limitations of the data upon which we have relied in formulating our findings, opinions, conclusions, and/or recommendations. Additional limitations are as follows:

- Current and past property owners knowledgeable of the histories of sites in the study corridor were not all available for interviews during site reconnaissance.
- MSE did not receive building plans for any of the structures within the study corridor for review.
- MSE did not access the interiors of the structures within the study corridor.
- Historical aerials were not available prior to 1944.
- This study does not include surveys of wetlands, endangered species, or other potential hazardous building materials.
- Locations of underground utilities were not provided for the assessment.
- This study did not include ACM or MBC testing of bridges or underground utilities.
- Attempts to identify former CDV locations, USTs, ASTs, and other evidence of potential contamination were limited to observations made from public roadways (private properties were not traversed).

## **14.0 Use of This Report**

MSE has prepared this CSER for the exclusive use of our client, Inwood Consulting Engineers, Inc., along with Osceola County Department of Transportation and Transit, for specific application to the N. Old Lake Wilson Road from CR 532 to 730 feet south of Sinclair Road study corridor. MSE will not be held responsible for any other party's interpretation or use of this report's data or recommendations without our written authorization.

MSE has strived to provide the services described in this report in a manner consistent with that level of care and skill ordinarily exercised by members of our profession currently practicing in Florida. No other representation is made or implied in this document. The conclusions and recommendations of this report should be disregarded if the nature, design, or location of the facilities is changed.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by MSE Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## Certified Sanborn Results:

**Certification #** CFA6-4516-8EB6  
**PO #** NA  
**Project** 1285.012

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: CFA6-4516-8EB6

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

MSE Group (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SUBJECT PROPERTY INFORMATION

#### ADDRESS

OSCEOLA COUNTY, FLORIDA  
KISSIMMEE, FL 34747

### TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifications refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Lists of state and tribal leaking storage tanks***

LUST: Petroleum Contamination Detail Report

A review of the LUST list, as provided by EDR, and dated 07/23/2021 has revealed that there is 1 LUST site within the requested target property.

<u>Site</u>	<u>Address</u>	<u>Map ID / Focus Map(s)</u>	<u>Page</u>
<b><i>HERMAN J HEIDRICH &amp;</i></b> Discharge Cleanup Status: SRCR - SRCR COMPLETE Facility Status: CLOSED Facility-Site Id: 9100367	<b><i>1261 S OLD LAKE WILS</i></b>	<b><i>B8 / 4</i></b>	<b><i>33</i></b>

#### ***Lists of state and tribal registered storage tanks***

UST: Storage Tank Facility Information

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within the requested target property.

<u>Site</u>	<u>Address</u>	<u>Map ID / Focus Map(s)</u>	<u>Page</u>
<b><i>HERMAN J HEIDRICH &amp;</i></b> Database: UST, Date of Government Version: 08/13/2021 Tank Status: B	<b><i>1261 S OLD LAKE WILS</i></b>	<b><i>B8 / 4</i></b>	<b><i>33</i></b>

## EXECUTIVE SUMMARY

Facility-Site Id: 9100367  
Facility Status: CLOSED

### ADDITIONAL ENVIRONMENTAL RECORDS

#### ***Other Ascertainable Records***

US AIRS: Aerometric Information Retrieval System Facility Subsystem

A review of the US AIRS list, as provided by EDR, has revealed that there is 1 US AIRS site within the requested target property.

**Environmental Interest/Information System:**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### *Lists of Federal NPL (Superfund) sites*

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2021	Source: EPA
Date Data Arrived at EDR: 08/04/2021	Telephone: N/A
Date Made Active in Reports: 08/31/2021	Last EDR Contact: 11/05/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/10/2022
	Data Release Frequency: Quarterly

EPA Region 10  
Telephone 206-553-8665

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2021	Source: EPA
Date Data Arrived at EDR: 08/04/2021	Telephone: N/A
Date Made Active in Reports: 08/31/2021	Last EDR Contact: 11/05/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/10/2022
	Data Release Frequency: Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Data Release Frequency: No Update Planned

## ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2021

Telephone: 703-603-8704  
Last EDR Contact: 10/01/2021  
Next Scheduled EDR Contact: 01/10/2022  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/29/2021  
Date Data Arrived at EDR: 08/04/2021  
Date Made Active in Reports: 08/31/2021

Next Scheduled EDR Contact: 01/24/2022  
Data Release Frequency: Quarterly

## ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/29/2021	Source: EPA
Date Data Arrived at EDR: 08/04/2021	Telephone: 800-424-9346
Date Made Active in Reports: 08/31/2021	Last EDR Contact: 11/05/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/24/2022
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA facilities undergoing Corrective Action***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 09/13/2021	Source: EPA
Date Data Arrived at EDR: 09/15/2021	Telephone: 800-424-9346
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 09/15/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/03/2022

## ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (404) 562-8651
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 09/15/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/03/2022
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (404) 562-8651
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 09/15/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/03/2022
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (404) 562-8651
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 09/15/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/03/2022
	Data Release Frequency: Quarterly

## RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (404) 562-8651
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 09/15/2021
Number of Days to Update: 27	Next Scheduled EDR Contact: 01/03/2022
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 07/12/2021	Source: Department of the Navy
Date Data Arrived at EDR: 08/06/2021	Telephone: 843-820-7326
Date Made Active in Reports: 10/22/2021	Last EDR Contact: 11/08/2021
Number of Days to Update: 77	Next Scheduled EDR Contact: 02/21/2022
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/23/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/23/2021	Telephone: 703-603-0695
Date Made Active in Reports: 11/12/2021	Last EDR Contact: 11/18/2021
Number of Days to Update: 81	Next Scheduled EDR Contact: 03/06/2022
	Data Release Frequency: Varies

### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/23/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/23/2021	Telephone: 703-603-0695
Date Made Active in Reports: 11/12/2021	Last EDR Contact: 11/19/2021
Number of Days to Update: 81	Next Scheduled EDR Contact: 03/07/2022
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

### ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 06/14/2021

Source: National Response Center, United States Coast Guard

Date Data Arrived at EDR: 06/17/2021

Telephone: 202-267-2180

Date Made Active in Reports: 08/17/2021

Last EDR Contact: 09/21/2021

Number of Days to Update: 61

Next Scheduled EDR Contact: 01/03/2022

Data Release Frequency: Quarterly

## ***Lists of state- and tribal hazardous waste facilities***

### SHWS: Florida's State-Funded Action Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 01/13/2020

Source: Department of Environmental Protection

Date Data Arrived at EDR: 02/19/2020

Telephone: 850-488-0190

Date Made Active in Reports: 04/28/2020

Last EDR Contact: 11/15/2020

Number of Days to Update: 69

Next Scheduled EDR Contact: 02/28/2022

Data Release Frequency: Semi-Annually

## ***Lists of state and tribal landfills and solid waste disposal facilities***

### SWF/LF: Solid Waste Facility Database

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 07/12/2021

## ***State and tribal institutional control / engineering control registries***

### ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

## ***Lists of state and tribal brownfield sites***

### BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

Date of Government Version: 04/23/2021

### BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### **FL SITES: Sites List**

This summary status report was developed from a number of lists including the Eckhardt list, the Moffitt list, the EPA Hazardous Waste Sites list, EPA's Emergency & Remedial Response information System list (RCRA Section 3012) & existing department lists such as the obsolete uncontrolled Hazardous Waste Sites list. This list is no longer updated.

### **US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### **RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Such information has been reprinted with the permission of Endeavor Business Media.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Department of Children & Families

Source: Provider Information

Telephone: 850-488-4900

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetlands Inventory

Re: Heller Property, Contamination  
Assessment Report

File: 628.21

Dear Ms. Metrin:

In response to our conversation on November 17 concerning pesticide sampling of ground water, Blasland, Bouck & Lee (BB&L) offers the following response on behalf of the Walt Disney World Co.

Results from pre-burn soil sampling at source areas SA2 and SA3 indicated the presence of the pesticide dieldrin. Ground-water samples were subsequently collected from monitor wells MW1, MW2 and MW3 located in source areas SA1, SA2 and SA3, respectively. These samples were submitted to a state-certified laboratory for dieldrin analysis, and the results indicated non-detectable concentrations with a detection limit of 0.05 ug/L (see enclosure).

If you have any questions or require additional information please feel free to call me.

Sincerely,

Blasland, Bouck & Lee

Contamination Assessment Report and  
No Further Action Proposal Review

Dear Mr. Rodriguez:

The Department has reviewed the Addendum to the Contamination Assessment Report (CAR) and No Further Action Proposal (NFAP) received October 29, 1992, for the referenced site. Documentation submitted with the NFAP confirms that criteria set forth in Section 17-770.630(3), Florida Administrative Code (F.A.C), have been met. The NFAP is hereby incorporated by reference in this Order. Therefore, you are released from any further obligation to conduct site rehabilitation at the subject site, except as set forth below.

If a subsequent discharge of petroleum or petroleum product occurs at the site, the Department may require site rehabilitation in order to reduce contaminate concentration to the levels approved through review of the NFAP or otherwise allowed by Chapter 17-770, F.A.C.

Additionally, you are required to properly abandon all monitoring wells except compliance wells required by Chapter 17-761, F.A.C., for release detection. The wells must be abandoned in accordance with the requirements of Rule 17-532.500(4), F.A.C.

Mr. Armando Rodriguez  
Walt Disney World Company  
OCD-TK-92-0380  
December 3, 1992  
Page Two

Persons whose substantial interests are affected by this Site Rehabilitation Completion Order have a right to challenge the Department's decision. Such challenge may include filing a petition for an administrative determination (hearing) as described in the following paragraphs. However, pursuant to Chapter 17-103, F.A.C., you may request an extension of time to file the petition. All requests for extensions of time or petitions for administrative determinations must be filed directly with the Department's Office of General Counsel at the address given below within 21 days of the receipt of this notice (do not send them to the District Office).

Notwithstanding the above, a person whose substantial interests are affected by this Site Rehabilitation Completion Order may petition for an administrative proceeding (hearing) in accordance with Section 120.57, Florida Statutes (F.S.). The petition must contain the information set forth below and must be filed (received) in the Office of General Counsel of the Department at 2600 Blair Stone Road, Tallahassee, Florida 32399-2400, within 21 days of receipt of this notice. Failure to file a petition within the 21 days constitutes a waiver of any right such persons have to an administrative determination (hearing), pursuant to Section 120.57, F.S.

The Petition shall contain the following information:

- (a) The name, address, and telephone number of each petitioner, the Department file number (DER facility number), and the name and address of the facility;
- (b) A statement of how and when each petitioner received notice of the Department's action or proposed action;
- (c) A statement of how each petitioner's substantial interest are affected by the Department's action or proposed action;
- (d) A statement of the material facts disputed by each petitioner, if any;
- (e) A statement of facts which each petitioner contends warrant reversal or modification of the Department's action or proposed action;
- (f) A statement of which rules or statutes each petitioner contends require reversal or modification of the Department's action or proposed action; and
- (g) A statement of the relief sought by each petitioner stating precisely the action each petitioner wants the Department to take with respect to the Department's action or proposed action.

This Site Rehabilitation Completion Order is final and effective on the date of receipt of this Order, unless a petition is filed in accordance with the preceding paragraph. Upon the timely filing of a petition, this Order will not be effective until further order of the Department.

Mr. Armando Rodriguez  
Walt Disney World Company  
OCD-TK-92-0380  
December 3, 1992  
Page Three

When the Order is final, any party to the Order has the right to seek judicial review of the Order pursuant to Section 120.68, F.S., by filing of a Notice of Appeal pursuant to Rule 9.110, Florida Rules of Appellate Procedure, with the Clerk of the Department in the Office of General Counsel, 2600 Blair Stone Road, Tallahassee, Florida 32399-2400; and by filing a copy of the Notice of Appeal, accompanied by the applicable filing fees, with the appropriate District Court of Appeal. The Notice of Appeal must be filed within 30 days from the date the Final Order is filed with the Clerk of the Department.

The DER Facility Number for this site is 598734250. Please use this identification on all future correspondence with the Department.

Any questions you may have on the technical aspects of this Site Rehabilitation Completion Order should be directed to Deborah Metrin, P.G. at (407) 894-7555. Contact with the above-named person does not constitute a petition for administrative determination.

Sincerely,

John M. Ruddell, Director  
Division of Waste Management

RE: 123 Acre (Heller) Parcel in Osceola County

Dear Ms. Metrin:

Enclosed is a completed F.D.E.R. Form 17-700.900(1) for the above referenced facility. During the process of removing an abandoned underground diesel fuel pipe line, a small area of contaminated soil was discovered.

All future correspondence regarding this facility should be directed to the WALT DISNEY WORLD Co. Environmental Control Department. Please contact me if you have any questions or require additional information.

Sincerely,

Armando Rodriguez  
Manager  
Environmental Control

## Appendix G – Osceola County Cattle Dipping Vats

---

## **Cattle Dipping Vats in Florida**

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides such as DDT were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard. See listing by county of known cattle dip vats.

Some of the sites have been located and are currently under investigation. However, most of the listings are from old records of the State Livestock Board, which listed each vat as it was put into operation. In addition, some privately operated vats may have existed which were not listed by the Livestock Board. Some county boundaries may have changed since the vats were first listed.

Persons who can identify the exact locations of these vats are encouraged to contact the Florida Department of Environmental Protection, Division of Waste Management. Please see the contact information provided on the Cattle Dip Vat website or write to us at:

**GEOCHECK VERSION 2.1**  
**STATE DATABASE WELL INFORMATION**

Enforcement Detail:	St Compliance achieved	Enforcement Category:	Resolving
PWS name:	GREEN MEADOWS FARM	Population served:	25
PWS type code:	NC	Violation ID:	20050002122
Contaminant:	NITRATE	Violation type:	3
Compliance start date:	1/1/2004 0:00:00	Compliance end date:	12/31/2004 0:00:00
Enforcement date:	2/28/2005 0:00:00	Enforcement action:	State Compliance Achieved
Violation measurement:	Not Reported		

# FLORIDA GOVERNMENT WELL RECORDS SEARCHED

## PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

## PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

## USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## State Wetlands Data: Wetlands Inventory

Source: Department of Environmental Protection

Telephone: 850-245-8238

## Well Construction Permitting Database

Source: Northwest Florida Water Management District

Telephone: 850-539-5999

## Consumptive Use Permit Well Database

Source: St. Johns River Water Management District

Telephone: 386-329-4841

## DEP GWIS - Generalized Water Information System Well Data

Source: Department of Environmental Protection

Telephone: 850-245-8507

Data collected for the Watershed Monitoring Section of the Department of Environmental Protection.

## DOH and DEP Historic Study of Private Wells

Source: Department of Environmental Protection

Telephone: 850-559-0901

Historic database for private supply wells.

## Permitted Well Location Database

Source: South Florida Water Management District

Telephone: 561-682-6877

## Super Act Program Well Data

Source: Department of Health

Telephone: 850-245-4250

This table consists of data relating to all privately and publicly owned potable wells investigated as part of the SUPER Act program. The Florida Department of Health's SUPER Act Program (per Chapter 376.3071(4)(g), Florida Statutes), was given authority to provide field and laboratory services, toxicological risk assessments, investigations of drinking water contamination complaints and education of the public.

## Water Well Location Information

Source: Suwannee River Water Management District

Telephone: 386-796-7211

## Water Well Permit Database

Source: Southwest Water Management District

Telephone: 352-796-7211

## Oil and Gas Permit Database

Source: Department of Environmental Protection

Telephone: 850-245-3194

Locations of all permitted wells in the state of Florida.

## Florida Sinkholes

Source: Department of Environmental Protection, Geological Survey

Telephone:

The sinkhole data was gathered by the Florida Sinkhole Research Institute, University of Florida.
